ABSTRACT

Vague set is very useful in providing of a flexible model to elaborate uncertainty and vagueness involved in decision making. In this paper, we reviewed the concept of vague set and apply translates operators on vague set, also proposed its application for carrier determination by using the translate of euclidean distance method. To measure the each student and each carrier respectively. Its solution is obtained by looking shortest distance between each student and each carrier.

Key words: Vague set, Carrier choice, Carrier determination, Euclidean distance.

INTRODUCTION

An important point in the evaluation of the modern concept of uncertainty was the notation of Zadeh 10 defining by fuzzy set and it has revolutionized the theory of Mathematical Modeling, Decision making etc., in handling the imprecise real life situations Mathematically. It is believed that vague sets 3 will be more useful in decision making, and other areas of mathematical modeling. A fuzzy set t A of a set X is a mapping from X : → [0,1], where as a vague set A of set X is a pair (t A , f A ), where t A , f A are functions from X → [0,1] with t A (x) + f A (x) ≤ 1 for all x in X. The algebraic aspects of vague sets were initiated by Biswas 2 by studying the concepts of vague groups, vague normal groups etc., as generalization of the theory of fuzzy groups etc. Further Ramakrishna 6,7 continued the study of vague algebra.

In this paper, we will discuss the vague translation operators $T_{\alpha^+}$ and $T_{\alpha^-}$ and reviewed the concept of vague set and apply translate operators on vague set, also proposed its application for carrier determination by using the translates of euclidean distance Method. To measure the each student and each carrier, respectively. Its solution is obtained by looking shortest distance between each student and each carrier.

Preliminaries

We give here a review of some definitions and results, which are in Gau and Buhere\textsuperscript{3}, Ramakrishana\textsuperscript{6,7} and Biswas\textsuperscript{2}.

Definition\textsuperscript{3} 2.1: A vague set $A$ in the universe of discourse $U$ is a pair $\langle t_A, f_A \rangle$ where $t_A : X \rightarrow [0,1], f_A : X \rightarrow [0,1]$ with $t_A(x) + f_A(x) \leq 1$ for all $x$ in $X$. Here $t_A$ is called the membership function and $f_A$ is called non-membership function and also called true membership function, false membership function, respectively.

Definition\textsuperscript{4} 2.2: Let $X$ be a non-empty set, let $A = (t_A, f_A)$ be a vague set of $X$ and $\alpha \in [0,1]$. Then

(a) $T_{\alpha^+}(A) = (t_{T_{\alpha^+}}, f_{T_{\alpha^+}})$

where $t_{T_{\alpha^+}}(x) = \min \{t_A(x) + \alpha, 1\}$ and $f_{T_{\alpha^+}}(x) = \max \{f_A(x) - \alpha, 0\}$

(b) $T_{\alpha^-}(A) = (t_{T_{\alpha^-}}, f_{T_{\alpha^-}})$

where $t_{T_{\alpha^-}}(x) = \max \{t_A(x) - \alpha, 0\}$ and $f_{T_{\alpha^-}}(x) = \min \{f_A(x) + \alpha, 1\}$

Here, we call $T_{\alpha^+}(A)$ is called translate of vague increasing operator and $T_{\alpha^-}(A)$ is called translate of vague decreasing operators, respectively.

Remark (2.3)\textsuperscript{4}: $T_{\alpha^+}(A)$ and $T_{\alpha^-}(A)$ are vague sets of $X$ where $A$ is a vague set of $X$, Since $0 \leq t_{T_{\alpha^+}}(x) + f_{T_{\alpha^+}}(x) \leq 1$ and $0 \leq t_{T_{\alpha^-}}(x) + f_{T_{\alpha^-}}(x) \leq 1$

Application of the translate of vague sets in career determination

Providing sufficient information to students for proper carrier guidance is the core. This is important because lack of proper carrier guidance faced by many students are of great consequence on their carrier option and competence. Therefore, it is very crucial that students be given enough information on carrier choice to enhance sufficient planning,
research and proficiency. Among the career determining factors such as academic presentation, awareness, individuality make-up etc. we use vague sets as tool since it incorporates the membership degree (i.e the marks of the questions answered by the student), Non-membership degree (i.e the marks of the questions the student failed).

Let \( S = \{x_1, x_2, x_3, x_4\} \) be the set of students and Let \( D = \{\text{Thermal engineering, production engineering, Industrial engineering, Machine design}\} \) be the set of careers and decision subjects (DS) = \{English, Mathematics, Physics, Chemistry\} be the subjects related to careers. We assume the above students sit for examinations (i.e. over 100 marks total) on the above mentioned subjects to determine their career placements and choices.

**Definition 3.1:** The E. Szmidt. Euclidean formula for the career determination can be defined by –

\[
E(\alpha) = T_\alpha (A_i, P_i) = \frac{1}{\sqrt{2n}} \sum_{i=1}^{n}\left((t_{Ai}(x_i) - t_{Pi}(x_i))^2 + (f_{Ai}(x_i) - f_{Pi}(x_i))^2\right)^{1/2}
\]

For \( i = 1, 2, 3, 4, 5 \ldots n \).

Where \( t_{Ai}(x_i), t_{Pi}(x_i) \) represents the membership values having who scored marks in the subjects.

And \( f_{Ai}(x_i), f_{Pi}(x_i) \) represents the non-membership values having who not scored marks in the subjects.

The following Table 1 shows students and related subjects.

<table>
<thead>
<tr>
<th></th>
<th>English</th>
<th>Mathematics</th>
<th>Physics</th>
<th>Chemistry</th>
</tr>
</thead>
<tbody>
<tr>
<td>( X_1 )</td>
<td>((x_1, 0.7, 0.3))</td>
<td>((x_1, 0.5, 0.1))</td>
<td>((x_1, 0.4, 0.0))</td>
<td>((x_1, 0.6, 0.2))</td>
</tr>
<tr>
<td>( X_2 )</td>
<td>((x_2, 0.5, 0.1))</td>
<td>((x_2, 0.6, 0.1))</td>
<td>((x_2, 0.4, 0.0))</td>
<td>((x_2, 0.5, 0.1))</td>
</tr>
<tr>
<td>( X_3 )</td>
<td>((x_3, 0.6, 0.2))</td>
<td>((x_3, 0.5, 0.1))</td>
<td>((x_3, 0.5, 0.1))</td>
<td>((x_3, 0.8, 0.0))</td>
</tr>
<tr>
<td>( X_4 )</td>
<td>((x_4, 0.7, 0.3))</td>
<td>((x_4, 0.8, 0.2))</td>
<td>((x_4, 0.5, 0.1))</td>
<td>((x_4, 0.7, 0.1))</td>
</tr>
</tbody>
</table>

**Translate operators on the student related subjects.**

From the above Table (3.2), we can take as vague sets of the student related subjects.
Let $P_1 = \{(x_1, 0.7, 0.3), (x_1, 0.5, 0.1), (x_1, 0.4, 0.0), (x_1, 0.6, 0.2)\}$

$P_2 = \{(x_2, 0.5, 0.1), (x_2, 0.6, 0.1), (x_2, 0.4, 0.0), (x_2, 0.5, 0.1)\}$

$P_3 = \{(x_3, 0.6, 0.2), (x_3, 0.5, 0.1), (x_3, 0.5, 0.1), (x_3, 0.8, 0.0)\}$

$P_4 = \{(x_4, 0.7, 0.3), (x_4, 0.8, 0.2), (x_4, 0.5, 0.1), (x_4, 0.7, 0.1)\}$

Now we can find translate of $P_1$, $P_2$, $P_3$ and $P_4$, respectively.

$t_{\alpha^+} (x_1) = \min\{0.7 + 0.1, 1\} = 0.8$ and $f_{\alpha^+} (x_1) = \max\{0.3-0.1, 0\} = 0.2$

$t_{\alpha^+} (x_1) = \min\{0.5 + 0.1, 1\} = 0.6$ and $f_{\alpha^+} (x_1) = \max\{0.1-0.1, 0\} = 0.0$

$t_{\alpha^+} (x_1) = \min\{0.4 + 0.1, 1\} = 0.5$ and $f_{\alpha^+} (x_1) = \max\{0.0-0.1, 0\} = 0$

$t_{\alpha^+} (x_1) = \min\{0.6 + 0.1, 1\} = 0.7$ and $f_{\alpha^+} (x_1) = \max\{0.2-0.1, 0\} = 0.1$

$T_{\alpha^+} (P_1) = \{(x_1, 0.8, 0.2), (x_1, 0.6, 0.0), (x_1, 0.5, 0.0), (x_1, 0.7, 0.1)\}$

Similarly we can find the translate of the following values

$T_{\alpha^+} (P_2) = \{(x_2, 0.6, 0.0), (x_2, 0.7, 0.0), (x_2, 0.5, 0.0), (x_2, 0.6, 0.0)\}$

$T_{\alpha^+} (P_3) = \{(x_3, 0.7, 0.1), (x_3, 0.6, 0.0), (x_3, 0.6, 0.0), (x_3, 0.9, 0.0)\}$

$T_{\alpha^+} (P_4) = \{(x_4, 0.8, 0.2), (x_4, 0.9, 0.1), (x_4, 0.6, 0.0), (x_4, 0.8, 0.0)\}$

The following table shows on the student careers placement subjects

<table>
<thead>
<tr>
<th></th>
<th>English</th>
<th>Mathematics</th>
<th>Physics</th>
<th>Chemistry</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thermal engineering</td>
<td>((x_1, 0.5, 0.1))</td>
<td>((x_1, 0.7, 0.3))</td>
<td>((x_1, 0.6, 0.2))</td>
<td>((x_1, 0.8, 0.3))</td>
</tr>
<tr>
<td>Production engineering</td>
<td>((x_2, 0.7, 0.1))</td>
<td>((x_2, 0.7, 0.3))</td>
<td>((x_2, 0.5, 0.4))</td>
<td>((x_2, 0.7, 0.3))</td>
</tr>
<tr>
<td>Industrial engineering</td>
<td>((x_3, 0.5, 0.3))</td>
<td>((x_3, 0.6, 0.2))</td>
<td>((x_3, 0.7, 0.3))</td>
<td>((x_3, 0.4, 0.0))</td>
</tr>
<tr>
<td>Machine design</td>
<td>((x_4, 0.5, 0.3))</td>
<td>((x_4, 0.6, 0.1))</td>
<td>((x_4, 0.7, 0.2))</td>
<td>((x_4, 0.4, 0.3))</td>
</tr>
</tbody>
</table>

**Translate operators on the students’ career placement subjects**

From the above Table (3.4), we can take as vague sets of the student related subjects are –
Let \( A_1 = \{(x_1, 0.5, 0.1), (x_1, 0.7, 0.3), (x_1, 0.6, 0.2), (x_1, 0.8, 0.2)\} \)
\( A_2 = \{(x_2, 0.7, 0.1), (x_2, 0.7, 0.3), (x_1, 0.6, 0.2), (x_2, 0.7, 0.3)\} \)
\( A_3 = \{(x_3, 0.5, 0.3), (x_3, 0.6, 0.2), (x_3, 0.7, 0.3), (x_3, 0.4, 0.0)\} \)
\( A_4 = \{(x_4, 0.5, 0.3), (x_4, 0.6, 0.2), (x_4, 0.7, 0.3), (x_4, 0.4, 0.0)\} \)

Translate of the student career subject’s values by using the definition (2.2).

\( t_{\alpha^+} (x_1) = \min \{0.5 + 0.1 ,1\} = 0.6 \) and \( f_{\alpha^+} (x_1) = \max \{0.1-0.1, 0\} = 0.0 \)
\( t_{\alpha^+} (x_1) = \min \{0.7 + 0.1 ,1\} = 0.8 \) and \( f_{\alpha^+} (x_1) = \max \{0.3-0.1, 0\} = 0.2 \)
\( t_{\alpha^+} (x_1) = \min \{0.6 + 0.1 ,1\} = 0.7 \) and \( f_{\alpha^+} (x_1) = \max \{0.2-0.1, 0\} = 0.1 \)
\( t_{\alpha^+} (x_1) = \min \{0.8 + 0.1 ,1\} = 0.9 \) and \( f_{\alpha^+} (x_1) = \max \{0.2-0.1, 0\} = 0.1 \)
\( T_{\alpha^+} (A_1) = \{(x_1, 0.6, 0.0), (x_1, 0.8, 0.2), (x_1, 0.7, 0.1), (x_1, 0.9, 0.1)\} \)

Similarly we can find the following values

\( T_{\alpha^+} (A_2) = \{(x_2, 0.8, 0), (x_2, 0.8, 0.2), (x_2, 0.7, 0.2), (x_2, 0.8, 0.2)\} \)
\( T_{\alpha^+} (A_3) = \{(x_3, 0.6, 0.2), (x_3, 0.7, 0.1), (x_3, 0.8, 0.2), (x_3, 0.5, 0.0)\} \)
\( T_{\alpha^+} (A_4) = \{(x_4, 0.6, 0.2), (x_4, 0.7, 0.1), (x_4, 0.8, 0.2), (x_4, 0.5, 0.0)\} \)

Translate operators of the Euclidean distance for Student career Determination.

The Szmidt. E Euclidean formula for the career determination method (3.1) is given by –

\[\text{E.D of (TEG)} = T_{\alpha^+} (A_1, P_1) = \frac{1}{2^n} \cdot \left[ (t_{A_1} (x_1) - t_{P_1} (x_1))^2 + (f_{A_1} (x_1) - f_{P_1} (x_1))^2 \right]^{1/2} \]

\[= \frac{1}{2} \left[ (0.8-0.6)^2 + (0.2-0.0)^2 \right]^{1/2} = \frac{1}{2} \left[ (0.2)^2 + (0.2) \right]^{1/2} = 0.1415\]

\[\text{E.D of (PDE)} = (T_{\alpha^+} (A_1, P_1)) = \frac{1}{2} \left[ (0.8-0.6)^2 + (0.2-0.1)^2 \right]^{1/2} \]

\[= \frac{1}{2} \left[ (0.2)^2 + (0.1)^2 \right]^{1/2} = 0.0707\]
E.D of (IDE) = $T_{\alpha+}(A_1, P_1) = \frac{1}{2} [(0.7-0.3)^2 + (0.1-0.0)^2]^{1/2}$

\[ = \frac{1}{2} [(0.4)^2 + (0.1)^2]^{1/2} = 0.207 \]

E.D of (MDE) = $T_{\alpha+}(A_1, P_1) = \frac{1}{2} [(0.9-0.7)^2 + (0.1-0.1)^2]^{1/2}$

\[ = \frac{1}{2} [(0.2)^2 + (0.0)^2]^{1/2} = 0.1 \]

E.D of (TEG) = $T_{\alpha+}(A_2, P_2) = \frac{1}{2} [(0.8-0.6)^2 + (0.2-0.0)^2]^{1/2}$

\[ = \frac{1}{2} [(0.2)^2 + (0.2)^2]^{1/2} = 0.1119 \]

E.D of (PDE) = $T_{\alpha+}(A_2, P_2) = \frac{1}{2} [(0.4-0.5)^2 + (0.3-0.4)^2]^{1/2}$

\[ = \frac{1}{2} [(-0.1)^2 + (-0.1)^2]^{1/2} = 0.012 \]

E.D of (MDE) = $T_{\alpha+}(A_2, P_2) = \frac{1}{2} [(0.4-0.5)^2 + (0.2-0.0)^2]^{1/2}$

\[ = \frac{1}{2} [(0.2)^2 + (0.1)^2]^{1/2} = 0.05 \]

E.D of (MDE) = $T_{\alpha+}(A_2, P_2) = \frac{1}{2} [(0.8-0.6)^2 + (0.2-0.0)^2]^{1/2}$

\[ = \frac{1}{2} [(0.2)^2 + (0.2)^2]^{1/2} = 0.0049 \]

E.D of (TEG) = $(T_{\alpha+}(A_3, P_3)) = \frac{1}{2} [(0.6-0.7)^2 + (0.2-0.1)^2]^{1/2}$

\[ = \frac{1}{2} [(0.1)^2 + (0.1)^2]^{1/2} = 0.0707 \]
E.D of (PDE) = $T_{a^+} (A_3, P_3) = \frac{1}{2} \left[ (0.7-0.4)^2 + (0.1-0.0)^2 \right]^{1/2}$

= 0.1119

E.D of (IDE) = $T_{a^+} (A_3, P_3) = \frac{1}{2} \left[ (0.8-0.6)^2 + (0.2-0.0)^2 \right]^{1/2}$

= $\frac{1}{2} \left[ (0.04)^2 + (0.04)^2 \right]^{1/2} = 0.1415$

E.D of (MDE) = $T_{a^+} (A_3, P_3) = \frac{1}{2} \left[ (0.5-0.9)^2 + (0.0-0.1)^2 \right]^{1/2}$

= $\frac{1}{2} \left[ (0.04)^2 + (0.0)^2 \right]^{1/2} = 0.2062$

E.D of (TEG) = $T_{a^+} (A_4, P_4) = \frac{1}{2} \left[ (0.6-0.7)^2 + (0.2-0.2)^2 \right]^{1/2}$

= $\frac{1}{2} \left[ (0.1)^2 + 0 \right]^{1/2} = 0.05$

E.D of (PDE) = $T_{a^+} (A_4, P_4) = \frac{1}{2} \left[ (0.7-0.9)^2 + (0.1-0.1)^2 \right]^{1/2}$

= $\frac{1}{2} \left[ (0.04)^2 + 0.0 \right]^{1/2} = 0.02$

E.D of (IDE) = $T_{a^+} (A_4, P_4) = \frac{1}{2} \left[ (0.8-0.6)^2 + (0.1-0.0)^2 \right]^{1/2}$

= $\frac{1}{2} \left[ (0.2)^2 + (0.1)^2 \right]^{1/2} = 0.1119$

E.D of (MDE) = $(T_{a^+} (A_4, P_4) = \frac{1}{2} \left[ (0.8-0.5)^2 + (0.2-0)^2 \right]^{1/2}$

= $\frac{1}{2} \left[ (0.09) + (0.04)^2 \right]^{1/2} = 0.1802$

Carrier grading values by using Szmidt. E. Euclidean distance method
The above table shows the shortest distance gives the best career determination.

1. Student (x₁) is to read production engineering for his best career determination.
2. Student (x₂) is to read machine design engineering for his best career determination.
3. Student (x₃) is to read thermal engineering for his best career determination.
4. Student (x₄) is to read production engineering for his best career determination’s.

ACKNOWLEDGEMENT

The authors are grateful to Prof. K. L. N. Swamy for his valuable suggestions and discussions on this work.
