# X-ray structure analysis of $\beta$-(phenoxy)- $\alpha$-(1,1dimethylethyl) 1H-1,2,4-triazole-1-ethanol 

Jyotsna Sengar<br>Lecturer in Physics in Rajeev Gandhi Technical University Gandhi Nagar, Airport by Pass Road, Bhopal, (M.P), (INDIA)<br>Tel : 0755-2677343, 0755-2678812; Fax : 0755:2742006/2<br>E-mail : jyotsnachauhan2006@gmail.com<br>Received: $5^{\text {th }}$ May, 2007 ; Accepted: $10^{\text {th }}$ May, 2007

#### Abstract

In order to design more effective synthetic fungicides, it is necessary to analyze the three dimensional structure of these compounds and if possible the receptor molecule. The structures of these compounds can be obtained by X-ray diffraction method in crystalline form and they will invariably be similar to their structures in solution. Crystal and molecular structure of $\beta$-(phenoxy)- $\alpha(1,1$ dimethylethyl) $1 \mathrm{H}-1,2,4$-triazole-1-ethanol is given in figure 1.The composition of these crystals are confirmed by comparing the infra-red spectra of the two components. The unit cell parameters $\mathrm{a}=8.136(2) \AA \mathrm{b}=16.790(2) \AA \mathrm{c}=21.990 \AA$. The space group is determined to be $\mathrm{P} 2_{1} / \mathrm{n}$. The measured density is $1.3215 \mathrm{~g} / \mathrm{cm}^{3}$ and calculated density is $1.3102 \mathrm{~g} / \mathrm{cm}^{3}$. The average bond distances of $\mathrm{C}-\mathrm{H}$ and N H types are $0.96(2) \AA ̊$ and $0.90(1) \AA \AA$ respectively.

## EXPERIMENTAL

First grow the crystals of existing fungicids available and synthesize their derivatives in lab. The determination of structural perturbation in fungicide derivatives and comparison of the result of their molecular association with other receptor sites by X-Ray crystallography techniques will be done. In parallel with these structural studies, spectroscopic studies carried out on them. The goal is then to tie together the structural and spectroscopic studies to have more comprehensive account of the precise shape of these molecules, the non-covalent interaction which are likely to be involved in and the changes introduced in molecular geometry and electronic structure of these compounds as a result of their molecular association with other compounds.

Thus we study the structure of variety of such compounds and correlate their structure with biological activity, so that more safer and effective fungicides at reasonable price can be developed. In that particular fungicide $\beta$-(phenoxy)- $\alpha$-(1,1dimethylethyl) $1 \mathrm{H}-1,2,4-$ triazole-1-ethanol sample synthesized by Meiser at research center of Bayer AG in Wuppertal Elerfeld, West Germany was obtained directly from the market in powdered form. Crystallization was done by slow evaporation from a solution of cyclohaxenone at $282^{\circ} \mathrm{K}$ temp. The crystals obtained were white and rectangular in shape. The unit cell parameters were determined by automatic computerized 4-circled enraf-Nonius CAD4 Diffractometer. The preliminary information about crystal is given in TABLE 1.

X-ray crystallography; Systemic fungicides; Triazole structure.

## Data collection and structure solution

The three-dimensional intensity data are collected on a computerized automatic 4-circle CAD-4 EnrafNonius Diffractometer using graphite filtered $\mathrm{MoK} \alpha$ ( $\AA$ ) radiation's .All the data were corrected for lorentz and polarization effect, but no absorption correction was applied. Attenuation of the beam for measuring the strong reflection is accomplished by inserting calibrated pack varying from 3 to 10 as required.Three standard reflections $(4,0,0)(0,8,8),(0,8,0)$ were measured, where h varies from 0 to $10, \mathrm{k}$ from 0 to 15 and l from 0 to 18 The total number of unique reflections measured was 6742 . The crystal belongs to the Monoclinic sys-

tem and space groupP2/ $/ \mathrm{n}$. The crystal structure was solved using SHELXS-97, program for crystal structure solution.

## Refinement

The positional co-ordinates which were obtained from SHELXS-97 and their isotropic temperature factors were subjected to refinement by SHELXL-97 refinement program. The final R value was 0.09 for all the 6742 observed reflections. Fractional coordinates of non-hydrogen atoms and the equivalent isotropic thermal parameter is given in TABLE 2.

## RESULT AND DISCUSSION

The perspective view of the molecule and numbering scheme are shown in figure 2. The ORTEP drawing is shown in figure 3 . The bond lengths and angles in the two benzene rings have characteristics values and do

$\beta$-(phenoxy)- $\alpha$-(1,1-dimethylethyl) 1H-1,2,4-triazole-1-ehtanol

Figure 1

Figure 2: The perspective view and numbering scheme of $\beta$-(phenoxy)- $\alpha$-(1,1-dimethylethyl) $1 \mathrm{H}-1,2,4$ triazole-1ethanol
not merit significant comments. The average $\mathrm{C}-\mathrm{H}$ and $\mathrm{N}-\mathrm{H}$ distances in the structure are $0.96 \AA$ and $0.90 \AA$, respectively. The triazole rings are distorted in shapes. The average bond distances for $\mathrm{N}-\mathrm{N}$ and $\mathrm{C}-\mathrm{N}$ bonds are $1.340 \AA$ and $1.354 \AA$. The angles show unusual variations. In Molecule 1 the angles vary from $99.8^{\circ}$ to $120.1^{\circ}$, whereas in molecule 2 , the variation is from $104.9^{\circ}$ to $112.1^{\circ}$. The $C(7)$ and $C(22)$ atoms have usual geometry. It is of interest to see that the effect of steric hindrances. In molecule 1 , the angle $\mathrm{C}(6)-\mathrm{C}(1)-$

Figure 3: Ortep diagram

Figure 4 : The packing seen down a-axis
$\mathrm{O}(1)$ is $112.6^{\circ}$ whereas $\mathrm{C}(2)-\mathrm{C}(1)-\mathrm{O}(1)$ is $127.1^{\circ}$. On comparing to molecule 2,these angles are just $122.2^{\circ}$ and $117.8^{\circ}$, respectively. The geometry of phenoxy and methylethyl groups bears not attention as they are comparable to other organic structures. Fractional coordinates of non-hydrogen atoms and the equivalent isotropic thermal parameter is shown in TABLE 2

The equations of the Least squares planes, calculated using Blow method and the displacements of the relevant atoms from the mean planes for different planer groups together with the respective. The two Benzene rings are essentially planar as the deviations of atoms from the planes are of 0.002 . The triazole rings are also planar but the average deviations of atoms are 0.06. The two rings in Molecule 1 and 2 are inclined to each other by angles of $70.32^{\circ}$ and $66.56^{\circ}$. The dihedral angles between the rings in two molecules along $\mathrm{C}(7)-$ $\mathrm{O}(1)$ and $\mathrm{C}(22)-\mathrm{O}(3)$ bonds are $-85.39^{\circ}$ and $80.0^{\circ}$. It means the orientation or angle of twist in both the molecules is opposite with the approximate same amount. Bond Lengths (Angstrom) involving non-hydrogen atoms is shown in TABLE 3. Bond Angles (Degrees)(Angles are ordered on the middle label, left to right and top to bottom) involving non-hydrogen atoms is shown in TABLE 4.

## Hydrogen bonding and molecular packing

The Hydrogen bond parameters and some other non-bonded contacts are listed in TABLE 5. The molecular packing viewed down a-axis is shown in figure 4. The molecules are stacked along the $a-a x i s$ and held firmly through hydrogen bonds. There are two hydrogen bonds. The $\mathrm{N}(1)$ is bonded to $\mathrm{O}(4)$ and $\mathrm{N}(4)$ to $\mathrm{O}(2)$ of symmetry related molecules. There are no intermolecular bonds between molecule1 and Molecule 2. So they are held together by weak Vander-Walls forces between them. In general, the Molecules appear to be under heavy constraints. Thus we study the structure of variety of such compounds and correlate their structure with biological activity, so that more safer and effective fungicides at reasonable price can be developed.

## ACKNOWLEDGEMENT

The Financial assistance provided by Deptt of Science and Technology (D.S.T), New Delhi in form of Junior Research Fellowship is gratefully acknowledged. Iam thankful to Prof T. P Singh Head Deptt of Biophysics, AIIMS, New Delhi for providing me National Facility CAD-4Diffractometer and Lab. Iam also thankful to Prof. D. Vellmurgan, UNIV OF MADRAS for his valuable help in Data collection.
